

SEINE RIVER TRAIL

→ RECOMMENDED TREATMENT:

Construct a granular pathway in the forest on the west side of the Seine River between Shorehill Drive and Creek Bend Road.

→ KEY FEATURES / CONNECTIONS:

- ▶ 3.0 - 3.5 metre wide granular pathway
- ▶ 2.0 kilometres in length
- ▶ trailhead signage to indicate trail access points
- ▶ located near the Bois-des-esprits Trail and the South St. Vital Trail

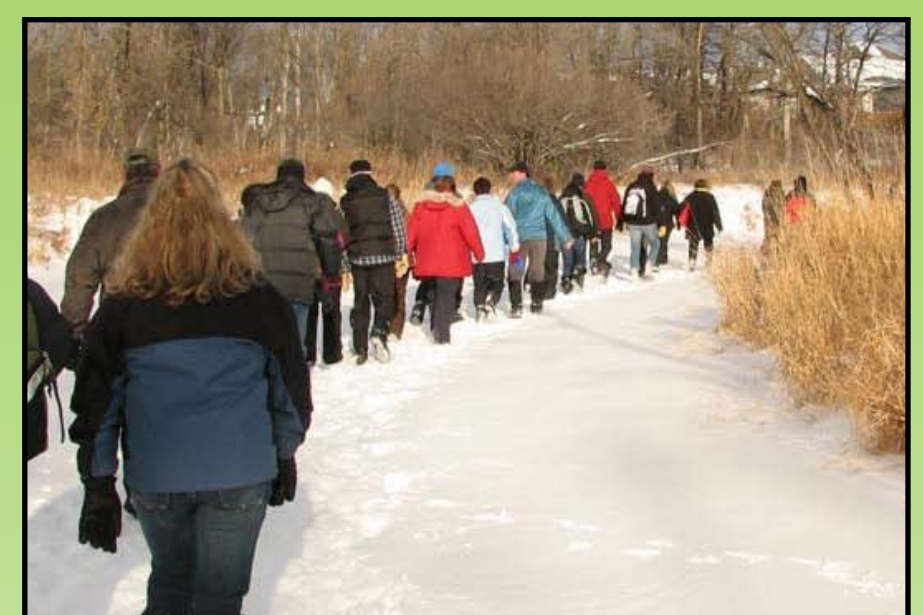

→ KEY CONSIDERATIONS:

The new trail will provide citizens with further access to the Seine River urban forest to observe wildlife and enjoy year-round recreational activities.

Trail construction will involve tree removal. The exact location of the pathway will be determined on site throughout the construction period, to help protect mature trees and other environmentally significant areas.
